

MAC500s tested in Thailand

A huge difference from where you place your MAC500s

Anavil from Cleanable in Thailand has tested the JIMCO product MAC500s, on a bedside table, placed next to the bed. There was also tested the same product on a bookshelf, that was placed a little bit higher in the room.

MAC500s next to the bedside table

The machine placed next on the bedside table, has we experienced that the ATP-level was decreased from 10280 to 3868, with measurements on the table, which is a high reduction in just 4 hours.

JIMCO expect, if you let the machine run for a longer period, a higher reduction.

MAC500s on the bookshelf

The machine placed next on the bookshelf, has we experienced that the ATP-level was decreased from 3623 to 2373, with measurements on the table, which is a high reduction in just 4 hours.

JIMCO expect, if you let the machine run for a longer period, a higher reduction.
