

# ELIMINATE MOLD WITH MAC500s

## ELIMINATE MOLD IN YOUR CHURCH ORGAN WITH MAC500S. IT IS COST-EFFECTIVE. IT IS CHEMICAL-FREE. IT IS EFFICIENT.

Mold is a well-known unwelcome companion in many church organs. The unheated, dark, and damp environment creates the perfect conditions for mold to grow, and once the fungal spores are in, it requires professional expertise and chemical solutions to remove them.

And mold is not only an aesthetic issue. Being in close contact with mold may also cause health-related risks for the organist such as allergies and respiratory diseases.

For these reasons, all churches with mold problems across Denmark already installed MAC500s to efficiently clean the air.

MAC500s is a well-documented, thoroughly tested air purification solution that has been used to prevent mold successfully for more than 20 years.

Install MAC500s in your church organ to avoid expensive, time-consuming cleaning and create a healthy and clean environment for both organists and churchgoers.
