

JIMCO TECHNOLOGY - SOLUTIONS FOR SUSTAINABLE FOOD ENTERPRISES

At JIMCO A/S, we are driven by our commitment to deliver top-tier solutions that adhere to sustainability and environmental correctness.

With the JIMCO unit FLO-K/P and FLO-D, clean air and secure surfaces remain the cornerstones of the modern food industry.

Jimco has been in existence since 1991, during which we have provided advice and sold our patented UV-C technology worldwide. We have distributors in over 40 countries - There are no tasks that are too big or too small.

Welcome to a world

where air quality and sustainability unite.

We present to you the JIMCO FLO systems, the innovative environmental technologies that are revolutionizing the food industry.

Jimmy K Larsen, Founder and CEO - JIMCO A/S

JIMCO FLO (Photo-Light-Oxidation) Systems:

Air Purification for Sustainable Food Enterprises
Creating Environment Without Odor

Features and Sustainability:

The FLO system is designed, among other things, to purify exhaust air from food enterprises.

Our advanced technology not only eliminates odors but also reduces harmful particles that could impact the environment. We understand the significance of sustainability and environmental correctness, which is why the FLO system operates with energy efficiency and responsibility. And thus, it is possible to have a factory in the middle of the city without causing any disturbance to potential neighbors with the exhaust air, as it can be easily purified using a FLO-P/K system.

JIMCO FLO-D:

Surface Disinfection for Secure Food Environments
Introducing JIMCO FLO-D, the advanced surface disinfection solution for the food industry, where hygiene and food safety are inseparable.

Effective Disinfection:

FLO-D is developed with a single purpose in mind: ensuring food safety through effective surface disinfection. Our technology combats bacteria and pathogens that could compromise the quality of food.

JIMCO UNIT FLO-D Mini Mark 2

Environmentally Friendly Solutions:

With FLO technology, we lead the way in protecting the environment.

Our air purification system minimizes potentially harmful substances, contributing to cleaner air and a more sustainable future.

Friendly Practices:

FLO-D emphasizes the need for sustainable practices, where hygiene and environmental considerations go hand in hand, as no chemicals or water are used here.

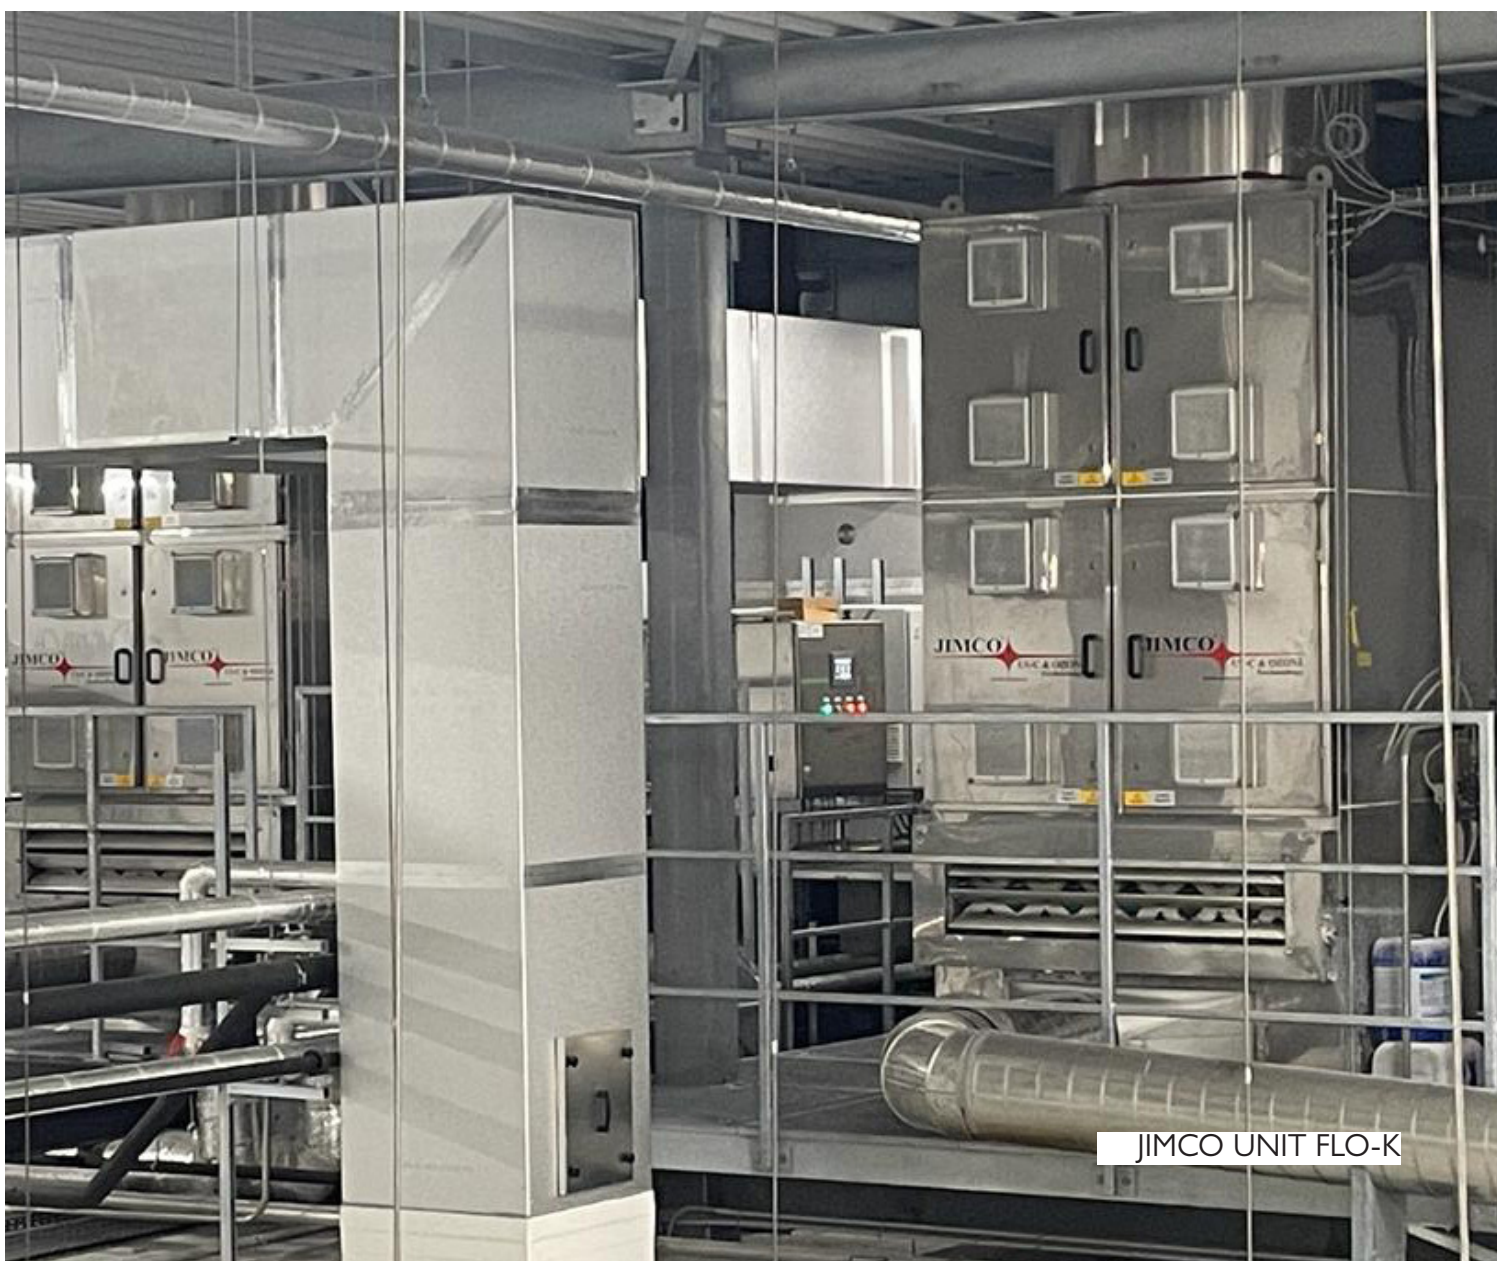

World-Leading Customers:

Our customers are global leaders in the food industry, valuing top-notch hygiene practices.

To meet the installation requirements of all JIMCO's customers, systems are designed precisely to fit into the current factory.
